**Decrees of President of Ukraine:**

**Resolutions of Cabinet of Ministers of Ukraine**
Main tasks of state veterinary service of Ukraine

- risk reduction or elimination of occurrence of zoonotic diseases and public health;
- protection of the territory of Ukraine from introduction of animal diseases from the territory of other countries or quarantine zones;
- protection of animals and the population from pathogens and animal diseases through the preventive, diagnostic and therapeutic measures;
- implementation of measures for prevention of animal diseases transmission through commodities, animal-care products and related commodities;
- establishment of efficient and effective means of detection, localization, control and elimination of endemic and exotic animal diseases introduced on the territory of Ukraine;
- ensuring of the reliable and effective measures for elimination of animal diseases outbreaks in order to reduce the losses of animals, and in the case of zoonotic diseases – reducing the risk to humans;
- monitoring of feed and water to ensure their suitability for use and prevention for the transmission of animal diseases;
- ensuring of the correct, appropriate, effective and safe usage of veterinary medical products;
- environment protection from negative effects that are associated with the rearing and movements of animals;
- protection of animal welfare from the negative effects that are associated with the cultivation and movement of animals;
- protect the welfare of animals by humane treatment throughout their lives;
- post mortem clinical inspection of animals and veterinary-sanitary examination for products of animal origin, including slaughtered animals for the hunting, including bacteriological, radiological, toxicological and parasitological laboratory tests;
- implementation of state veterinary and sanitary control and supervision in the production and circulation of animal products, including agricultural markets – plants, veterinary medical products, substances, feed additives, premixes, feed, microbial strains, reproductive and pathological material and the implementation of state veterinary and sanitary supervision during the circulation of funds for veterinary medicine;
- implementation of the national program for monitoring residues of veterinary medical products and other contaminants in animals, animal products and animal feed;

- implementation of a border veterinary and sanitary control and/or extended veterinary and sanitary control over objects of state veterinary and sanitary control and supervision;

- controls on the movement of objects of state veterinary and sanitary control and supervision within Ukraine;

- facilitation for the implementation of the animal identification system;

- promotion of continuous studying of specialists of veterinary medicine;

- promotion of the practice and the dissemination of scientific and practical achievements of veterinary medicine;

- development, implementation and application of animal health measures.
State Emergency Antiepizootic Committee (DNPK)

- Cabinet of Ministers of Ukraine creates a permanent State Emergency Antiepizootic Committee under the Cabinet of Ministers of Ukraine.

- State Emergency Antiepizootic Committee under the Cabinet of Ministers of Ukraine is **authorized** to exercise operational control, management and coordination of executive power, government agencies, enterprises, institutions, organizations and individuals with respect to the prevention of mass outbreaks of animal diseases and poisonings and their elimination.

- State Emergency Antiepizootic Committee under the Cabinet of Ministers of Ukraine **headed by Vice Prime Minister of Ukraine.** It consists of the **Chief State Inspector of Veterinary Medicine of Ukraine**, who is the Deputy Chairperson, the Deputy Chief Inspector of Veterinary Medicine of Ukraine, **heads of central executive bodies.**
Local State Emergency Antiepizootic Committee are formed by the Council of Ministers of the Autonomous Republic of Crimea, regional state administrations, the state administration of Kyiv and Sevastopol, city council, district administrations.

In case of suspected or confirmed outbreaks of highly dangerous OIE-listed diseases, local government Antiepizootic Committee must comply with the Resolutions of the State Emergency Antiepizootic Committee under the Cabinet of Ministers of Ukraine and report regularly on their activities.

Decision of the State Emergency Antiepizootic Committee of Cabinet of Ministers of Ukraine and local government emergency antiepizootic committees are mandatory for central executive bodies, local authorities and owners of animals and products.
Veterinary police

- The main objective of veterinary police is providing practical assistance to state veterinary authorities in order to organize and implement proper control and supervision for requirements and veterinary-sanitary measures on prevention, localization and eradication of infectious animal diseases by:
  - measures aimed at the elimination of outbreaks of infectious animal diseases;
  - implementation of state veterinary and sanitary control over the production and circulation of animal products, and on the markets including plant origin, veterinary medical products, substances, feed additives, premixes, feed, reproductive material, and means of veterinary medicine and animal-care products;
  - implementation of state veterinary and sanitary control and supervision over the movement of objects of the state veterinary and sanitary control and supervision within Ukraine, including animals;
  - verification of compliance with the rules of the issuance and registration of veterinary documents and records relating to the safety of products of animal origin and animal health;
  - stop or restriction over production and circulation of commodities in facilities in case of violation of their operators requirements of animal health measures;
  - participation in the epizootic investigation aimed to establishing the causes of infectious animal diseases, as well as the conditions that lead to the entry into circulation of dangerous or unfit for consumption food products that are under control of veterinary service.
Quarantine veterinary police post

- Quarantine veterinary police post – a temporary checkpoint for control that is created on the border quarantine zone or zones with earlier introduced quarantine restrictions on the establishment of quarantine or the decision to impose the previous quarantine restrictions in certain territory.
- Quarantine veterinary and police checkpoints are set after the day after the decision on the establishment of quarantine and approval of a plan of measures on localization, elimination and prevention of infectious animal diseases at farms, slaughterhouses and processing plants for animal products, raw materials of animal origin. Set in the settlements, roads, other facilities or a decision on the introduction of the previous quarantine restrictions and operate around the clock.
- The objectives of quarantine veterinary and police posts are providing of special quarantine regime, in particular with respect to total or partial ban:
  - transportation or driving of animals through quarantine area, import into this zone, export/output/animal from it;
  - export from the quarantine area of animal and plant origin, and other commodities, including feedstuff, with all kinds of vehicles, and its imposition of sending parcels;
  - access by unauthorized persons, animals and vehicles on the farm, other animal houses, slaughterhouses and processing plants of animals, products of animal origin, where is set the quarantine or earlier introduced quarantine restrictions (other than service personnel subject to them special access mode);
  - movement of vehicles in the quarantine or threatening zone.
In 2012 was detected the first case of ASF in Ukraine in Komyshuvatka village in Zaporizhia region.

Damage

In Village Komyshuvatka was destroyed 208 swine heads with total amount 277,117 hrivnas.

In 10-km zone was slaughtered 2,475 swine heads with total amount 2,000,000,258 thousands hrivnas.

TOTAL:
Slaughtered 2,683 swine heads
Reimbursements 2 mln. 535 ths. hrivnas
Depopulation of wild boars in Luhansk and Donetsk regions (approximately 1000 heads)
Depopulation of wild boars on the territory of Chernigiv region (89 heads, go on)
Thank you for attention!
